Wiley Electronics LLC
Washer, Electrical Equipment Bond

WEEB Patent Pending

INSTALLATION INSTRUCTIONS

For Professional Solar only

Please read carefully before installing.

WEEB-PMC

WEEBLug

WEEBL-6.7 assembly

Copper Braid

WEEB Bonding Jumper

Products are tested to UL 467 3098177
UL standard for safety grounding and bonding equipment

Document Number 104-0404-000008-008

Wiley Electronics LLC. 2006-2007© – All Rights Reserved
The WEEB family of products can be used to bond anodized aluminum, galvanized steel, steel and other electrically conductive metal structures.

**Standard Top Down Clamps**

The WEEBs used for bonding the PV modules to the mounting rails are compatible with various cross-sections of module frames. The following are examples of module frames that are compatible. Notice that the WEEB teeth are positioned completely under the edge of the module frame.

The following is an example of a module frame that is incompatible with the WEEB. The WEEB teeth are positioned only partially under the edge of the module due to the lip on the top edge of the module.
Top Down Clamps for Lipped Modules

The following are a few variations of lipped solar modules mounted with inverted U-shaped clamps. Notice that the force which the inverted U-shaped clamp exerts is in line with the WEEB teeth.

Low-Lipped Module

WEEB-PMC is not compatible with high lipped modules. The WEEB teeth do not intersect with the solar module frame.

High-Lipped Module
Use WEEB-PMC to bond solar modules to module mounting rail.

Use WEEB Bonding Jumper to electrically connect mechanically spliced rails.

Use one WEEBL-6.7 assembly per rail to connect system to equipment ground conductor.

**Important notes**

1. Use general purpose anti-seize compound on fastener threads when installing WEEBs.
2. WEEBs are intended for SINGLE USE ONLY. Functionality will not be guaranteed if reused.
Pre-assemble WEEB-PMC to mid-clamp assembly as shown. Pre-assembling WEEB-PMC to mid-clamp assembly will contain the small individual parts, reducing the possibility of losing parts during installation.
Slightly lift solar module and slide WEEB-PMC and mid-clamp assembly into position. WEEB teeth will automatically be aligned under the edge of the module when the mid-clamp assembly is correctly installed.

**Important note:**
To correctly install WEEB-PMC, ensure that both sides of the solar modules are completely positioned against the mid-clamp. Refer to WEEB compatibility page for illustrations.
Important note:
WEEBs are for SINGLE USE ONLY! Do not torque fasteners down if position of solar modules is not finalized. Only slightly tighten fasteners to keep modules in place.

When position of solar modules are finalized, torque fasteners to 15ft-lb / 20.5 N-m using general purpose anti-seize compound on threads.

Assemble end clamp to manufacturer's specification.
WEEB-PMC LAYOUT

EVEN NUMBER OF MODULES IN ROW

\[ C \times R = 4 \times 1 \]
\[ \text{WEEB-PMC NEEDED} = C \times R = 4 \times 1 = 4 \]

X DENOTES PLACES TO INSTALL WEEB-PMC

ODD NUMBER OF MODULES IN ROW

\[ C \times R = 5 \times 1 \]
\[ \text{WEEB-PMC NEEDED} = [C+1] \times R = [5+1] \times 1 = 6 \]

X DENOTES PLACES TO INSTALL WEEB-PMC

Note:
When replacing a single faulty module, also remove the adjacent module which contacts the same WEEBs as the faulty module. This will ensure that there are never ungrounded modules in the array.
Drill bolt clearance hole \(\phi\ 17/64\text{in} / 7\text{mm}\) on center of vertical rail support.

For best aesthetics, drill hole on least visible side of rail.

Assemble WEEBL-6.7 assembly and torque fasteners to 10 ft-lb / 13.5 N-m.

Important note:
WEEB-6.7 that sits under the WEEBLug is for SINGLE USE ONLY! Ensure position is correct before tightening.
Lay in equipment ground conductor and torque bolt to 7 ft-lb / 10 N-m.
⑨ WEEB Bonding Jumper can be used for all rail splices including expansion joints.

Torque fasteners to 10 ft-lb / 13.5 N-m
